

The Problem: Digital Fractures

TEXT AI — Team TEXT

Compulsive usage, sleep loss, focus erosion: harming wellbeing in students, professionals, everyone.

Old tools fail: Punitive (timers) or passive (dashboards) — not empathetic, not private, not actionable.

The Data:

College Students

- 46% self-identify as addicted
- 150+ daily phone checks
- 0.5–0.7 GPA points lost
- 68.7% poor sleep quality

Professionals

- 6h 49m daily screen time
- 8–10h work screen usage
- 43% disable notifications

Health-Conscious

- 30% surge in mental health apps
- 200K+ new users monthly
- High abandonment due to passive tracking

Our Vision: A co-intelligence to mend digital wellbeing, not just track it. We envision a world where humans and AI collaborate empathetically to restore focus, balance, and mindful digital habits.

Market Opportunity

Total Addressable Market

- \$2.5B – \$3.6B (20,750–30,000 Cr)

Serviceable (36mo)

- \$75M – \$108M (630–900 Cr)

Obtainable (Y1-3)

- \$750K – \$7.6M (6.3–63 Cr)

Key Segments (India)

- Students (750–1,500 Cr)
- Professionals (15K–21K Cr)
- Health-Conscious (5K–7.5K Cr)

Market Validation ✓

Competitors like **Layla Network AI** prove user willingness to pay for privacy-first AI. **Our Edge:** Layla is generalist and buggy; TEXTIT is specialist, seamless, and proactive.

Early interviews with 60+ students and professionals confirm a strong readiness to pay for calm-tech assistants that protect privacy by default.

The TEXIT Solution: Privacy-First Intelligence

- **Spotter Model:** On-device TFLite model analyzes 9+ context features to classify state: focus, idle checking, doomscrolling, etc.
- **Intelligent Nudges:** Local LLM provides gentle, context-aware interventions — not punitive blocks.
- **100% Privacy-by-Design:** Local processing, quantized models for speed.
- **Conversational Layer:** LLM-powered "Daily Story" for emotional, reflective engagement.
- **Future Vision:** Orchestration layer enables secure app-to-app automation without invasive permissions.

Together, these layers form a co-intelligent loop — human intent sensed, reflected, and refined through local AI awareness.

Monetization Strategy

Freemium model with an ethical, opt-in value network.

- **Freemium:** Core Spotter and nudges are free.
 - **Premium:** Advanced conversational features, "Daily Story" are premium.
 - **Aid Card Network:** Not ads, but opt-in channel for certified partners (wellness, meditation, healthy food).
 - Example: Detects fatigue → suggests "Aid Card" for stretch or green tea offer.
 - All triggers local only, user has full control.
- Our business model aligns with wellbeing ethics — no surveillance, no data resale, only voluntary value exchange.

Four Defensible Competitive Moats

- **Technical Complexity Moat:** Multi-model orchestration (Spotter + LLM) is a major engineering hurdle.
- **Trust Moat:** Radical privacy creates switching costs; users won't migrate sensitive data to the cloud.
- **Psychological Relationship Moat:** Conversational LLM builds bonds dashboards cannot.
- **Cultural Localization Moat:** Diwali, exam season, regional languages — resonance beyond Western apps.

Replication is Validation

Giants (Google/Apple) validate the market, but core models make them unable to compete:

- Google: Needs user data for ads; we don't. Users won't give deep access.
- Apple: Needs walled garden; we are app-agnostic, built for real world apps.

Our moat compounds through lived trust, continuous local learning, and culturally attuned engagement loops.

Trust & Safety by Design

Proactively addressing regulatory, clinical, and ethical guardrails.

- **Regulatory (DPDP Act 2023 Compliant):** Privacy by design, granular consent, grievance officer.
- **Product Improvement (Without Spying):** Never see personal data. Improvement is opt-in and anonymous. Only models and bug reports sent, with full user visibility and consent.
- **Ethical & LLM Guardrails:** Crisis workflows suggest helplines. Red-teaming for prompt injection, jailbreaking, bias.

Every design decision follows a “privacy and empathy first” protocol co-created with behavioral scientists and ethics advisors.

Go-to-Market Strategy

01 College Students

- Primary launch
- Campus ambassadors (5K/month)
- Univ. counseling partnerships
- Semester challenges (50K prizes)

02 Working Professionals

- Scale target
- Corp wellness (Swiggy, Flipkart, Zomato)
- LinkedIn thought leadership

03 Health-Conscious

- Expansion phase
- Wellness influencer partnerships
- App Store SEO ("digital detox")
- Premium positioning (249/month)

First 90 Days Execution Each phase captures qualitative and quantitative feedback to refine nudges, measure wellbeing impact, and improve adoption.

Phase	Target Outcome	Focus/Action
Weeks 1-2	Internal alpha: 10-20 users	Bug fixing, feedback
Weeks 3-4	Closed beta: up to 100 users	IIT MADRAS
Weeks 5-7	Pilot: 250+ users	Add external campuses
Weeks 8-12	Larger campus: 500+	Top campus clubs, corp intro
By Week 12	Public launch, pilot paying	CAC analysis

TEXTIT: Capabilities, Roadmap & Validation

Core:

- Spotter: On-device, >80% accuracy, 9 context features
- Gentle Nudges: Local AI, never punitive
- 100% local/quantized, privacy always visible

Roadmap:

- 0–90d: Scale to complete prototype
- 90–180d: Pilots, A/B, expand flows/partners

Validation: Consent-First, Privacy-Proof Feedback

Iteration, learning, and diagnostics all on-device; any feedback opt-in, user-controlled and visible. Bug reports/model weights sent only on explicit opt-in and shown transparently. Request feedback only after nudge, onboarding, or major update—never persistent.

Evidence-driven learning—without ever surrendering privacy or control.

These iterations convert behavioral data into aggregated insight loops — a living demonstration of co-intelligence in action.

Proof of Concept

APP:Netflix,USER STATE:ENGAGED_DOP

APP:whatsapp, USER STATE: phone_awake_morning

Ready for the paradigm shift?

*We all know what touchscreen did to mobile,
let's see what intelligence does to mobile.*

Not artificial—but authentic—intelligence that protects,
learns, and evolves with its user.

TEXTIT AI

From Privacy-First Assistant to
Co-Intelligent Wellbeing

On-device AI · Radical transparency · Local privacy
